This report may be of interest to members of the public, policy officials and other stakeholders to make local and national comparisons and to monitor the quality and effectiveness of services.
Notes on changes to publications

a) The publication in March 2019 of December 2018 experimental Bank staff figures will be the last publication by NHS Digital of information on NHS Bank staff. NHS Improvement now publishes more comprehensive information on Agency and Bank staff.

b) From September 2018 the GP Registrar figures derived from ESR to feed our associated GP workforce publications will be replaced with an alternative data source directly from Health Education England. This will more accurately identify doctors in training in a Primary Care setting.

This improvement in the GP data source will allow the exclusion of trainee doctors from our data that are not working in Secondary Care settings each month.

This may cause a fluctuation in the trainee doctor numbers in HCHS workforce statistics from September 2018 onward.

c) Restructuring of and reductions in the NHS Digital workforce are likely to impact on the frequency and volume of work produced on the HCHS workforce. Various options are being considered which may include the following:

- The move from monthly to only quarterly publication for staff in post numbers.
- The removal of tables necessary to match the scope of publications to the resources available to produce them.

Any changes will be announced prior to implementation.

d) Prior to March 2019 Consultant doctors were labelled Consultant (including Directors of Public Health). Recent work to identify Directors of Public Health in this part of the workforce identified less than 10 so from March 2019 the group will just be called Consultant in our publications and other work.

e) From April 2019 onwards the ‘Area of Work’ label will become known as ‘Care Setting’. This does not affect the numbers within these fields but more accurately reflects staff allocations.

Summary

These monthly NHS workforce statistics reflect the changes and developments following a consultation. For more information please refer to the Introduction.

Major changes following the consultation include:

- The focussing of this publication on staff in NHS Trusts and CCGs in England
- The quarterly publication of staff in NHS Support Organisations and Central Bodies in England
The counting of staff in Social Enterprises and Community Interest Companies to NHS Digital’s publication covering healthcare staff in the independent healthcare sector

The removal of records that are not receiving earnings for activity, for example a woman who has a contract but who is on maternity leave during the period covered by these statistics

The removal of some non-service contracts, for example Widow or Non-Executive Director

The reclassification of some staff to different staff groups

Monthly figures for headcount and full time equivalent (FTE) NHS Hospital and Community Health Service (HCHS) staff groups working in NHS Trusts and CCGs in England are published every month, covering the period from 30 September 2009 onwards.

The latest figures and previous reports are available here; NHS Workforce

Staff earnings (quarterly) and sickness absence (monthly) reports can be accessed at:

Sickness Absence

NHS Earnings

An additional set of statistics on staff in Trusts and CCGs and information for NHS Support Organisations and Central Bodies are published each;

September (showing June statistics)

December (showing September statistics)

March (showing December statistics)

June (showing March statistics)

Note: From March 2019 onwards (for quarterly reports) we have added an additional table showing the extra detail available from the Tertiary Area of Work field in ESR, this is included for Trusts and CCGs.

Recent responses to requests for additional analysis

Every month NHS Digital produces a range of additional work for customers that may be of interest to other users of NHS workforce statistics. This work is available on the following webpage which is continually updated: https://digital.nhs.uk/data-and-information/find-data-and-publications/supplementary-information
Further Information

If you are interested in statistics that are not contained within our publications or wish to discuss any related matter please contact Bernard Horan with your requests, comments and suggestions via:

Email: enquiries@nhsdigital.nhs.uk
Telephone: 0300 303 5678
Post: NHS Digital, 1 Trevelyan Square, Boar Lane, Leeds, LS1 6AE.

We hope this information is helpful and would be grateful if you could spare a couple of minutes to complete a short customer satisfaction survey.

Revisions and Issues

As expected with monthly statistics, some figures may be revised from month to month as issues are uncovered and resolved. Historical revisions and issues are highlighted in previous editions of this publication.

All monthly workforce publications include NHS Trust and CCG staff in England on ESR (and the single non-ESR NHS Foundation Trust) for Staff in Post figures.

NHS Digital welcomes feedback from users of the data on their opinions on this matter clearly stating ‘NHS Workforce’ as the subject heading, via the contact details in the ‘Further Information’ section above.

Note: From September 2016 a separate Data Quality Annex document is included.

The purpose of this document is to highlight issues that NHS Digital is aware of and which may have an impact on the data contained in the monthly HCHS workforce statistics publications.

This annex should not be considered as a complete list of all issues and should be treated with a degree of caution as it represents the best information available to NHS Digital at the time of its publication. It may be revised in future as further information becomes available.

This Annex will be updated monthly where appropriate. We welcome feedback and comments to inform this process via the contact details in the Further Information section.
Introduction

Please note, this publication presents the new style of the healthcare workforce following the results of an NHS workforce consultation carried out by the HSCIC (first published 30 March 2016).

These changes have been made public and will show a significant impact on the figures from this point forward in comparison to previously published data.

All previous months (back to September 2009) have been reconfigured and are available either within the accompanying Excel tables or as CSVs (published with the March 2016 report on 22 June 2016 and available here.

The data within this report relates to monthly HCHS workforce statistics for staff in NHS Trust and CCGs in England on ESR (and the single non-ESR NHS Foundation Trust – see below). ESR is a payroll and human resources system which, since April 2008, contains staff records for all NHS employed staff in England.

The following NHS staff groups are not included on the ESR system

- GPs, GP Practice staff and other Primary Care providers e.g. Dentists
- Chesterfield Royal Hospital NHS Foundation Trust which does not use ESR
- Those staff groups affected by Transforming Community Services (TCS) where the service is now provided by a non-NHS organisation

The changing nature of organisations that provide NHS services as part of Transforming Community Services (TCS) may impact on the overall totals as a greater number of third party providers external to the NHS are excluded from the figures.

The statistics presented in this Bulletin relate to monthly HCHS workforce data. It is not possible to produce compatible figures before September 2009.

These data are published monthly and every 3 months, a supplemental publication of detailed statistics providing further granularity across staff groups and work areas are included. These more detailed data are also available on request in those months it is not placed on the website. It includes specific topic areas or service priority areas to investigate the data and associated data quality issues at a detailed level e.g. staff groups by grade. We welcome comments and suggestions for special topics of interest from users of workforce information.
**Data Quality**

**Data Quality Annex:**

Accompanying each monthly report is a separate data quality document. The purpose of this document is to highlight issues that NHS Digital is aware of and which may have an impact on the data contained in the monthly HCHS workforce statistics publications.

**Accuracy:**

A provisional status was originally applied to this information. This was because data flows are from a live operational system which could potentially change over time due to ongoing updates. However, the data has proved to be of sufficient quality to cease using this term. From March 2018 the term provisional has been dropped. Current analyses have shown that data for the same time frame, extracted 6 months later has a difference at a National level of less than 0.1%.

As expected with monthly statistics, some figures may be revised from month to month as issues are uncovered and resolved.

No refreshes of the data will take place either as part of the regular publication process, or where minor enhancements to the methodology have an insignificant impact on the figures at a national level, however revisions may occur if it is determined that a refresh of data is required after initial release. Where a refresh of data occurs, it will be clearly documented in the publications.

NHS Digital seeks to minimise inaccuracies and the effect of missing and invalid data but responsibility for data accuracy lies with the organisations providing the data. Methods are continually being updated to improve data quality.

The changing nature of organisations that provide NHS services as part of Transforming Community Services (TCS) may impact on the overall totals as a greater number of third party providers of NHS services are excluded from the figures. A programme of work is currently being undertaken to understand the associated issues and to work to resolve the implications for future publications.

A monthly data extract from ESR is put through several validation processes. Specific issues are highlighted, and reports sent to each organisation informing them of their levels of data quality and any issues they can then address. This has been well received by the NHS and has meant that more Trusts are willing to update data to save validation work in future. We want this to become the norm within NHS organisations and ensure greater emphasis is placed on improving data validation at source. See the methodology section below for further detail.

Figures are an accurate summary of the data supplied and validated as described above. However, given the size of the NHS workforce, its constantly changing composition, and the nature and timing of local data entry and checking processes, there will always remain some uncertainty in the true position of the NHS workforce.
Relevance:
Relevance of NHS workforce information is maintained by reference to working groups who oversee both data and reporting standards. Major changes to either are subject to approval by an NHS-wide Standardisation Committee for Care Information (SCCI).

Significant changes to workforce publication (e.g. frequency or methodology) are subject to consultation, in line with recommendations of the Code of Practice for Official Statistics.

Comparability and Coherence:
This is the latest publication of the monthly series of HCHS workforce statistics using data from the ESR. NHS Digital welcomes feedback on the methodology, plus the content and accuracy of tables within this publication.

Data will only be revised if there is sufficient reason to do so. Where a refresh of data occurs, it will be clearly documented in the publications.

Timeliness and punctuality:
The ESR data will be published within 3 months of the data time stamp.

Data was historically published on the 21st of each month, unless that fell on a Friday, Saturday, Sunday or Monday in which case it was the first Tuesday thereafter, (or first Wednesday thereafter if a Bank Holiday Monday is involved) to allow for 24-hour pre-release access.

However, following a public consultation on aligning publication dates, from June 2018 onwards publications will, where possible, be aligned on a specific topic with the intention of releasing most publications on a Thursday. This may move the traditional publication dates for this report by a few days. More information is available here.

Accessibility:
The monthly publication consists of high-level HCHS NHS Trust and CCG staff in England at National, HEE and organisational level by major staff groups. Tables of headcount and FTE are available. Further detailed analyses may be available on request, subject to resource limits and compliance with disclosure control requirements.

Performance cost and respondent burden:
The statistics use administrative data from ESR for all but a single trust, creating no burden on most trusts. The non ESR trust provides standard extracts from their own staff record systems.

Confidentiality, Transparency and Security:
The standard NHS Digital data security and confidentiality policies have been applied in the production of these statistics.
General issues to consider:

1 non-ESR Trust

There is one Foundation Trust not on ESR (Chesterfield Royal Hospital NHS Foundation Trust). Their data is collected on a quarterly basis and added into the monthly publication. This data is not suitable for the creation of turnover statistics. Prior to November 2018 one other Foundation trust was not using ESR (Moorfields Eye Hospital NHS Foundation Trust) so until a sufficient period of time has elapsed data for this Trust will also be unsuitable for turnover statistics.

Transforming Community Services (TCS)

The changing nature of organisations that provide NHS services as part of Transforming Community Services (TCS) may impact on the overall totals as a greater number of third party providers of NHS services are excluded from the figures.

Staff who work at different locations

Some staff are on one Trust’s payroll but work within a different Trust. This should be reflected in the ESR system and is used for publishing purposes to show where staff actually work. If Trusts do not record this then the staff will be reflected as working at the employing organisation rather than the workplace organisation.

Definitions of Headcount and FTE

This section states the definitions used within this monthly publication.

The methodology for the monthly publication will count a doctor who works across 2 hospitals, 0.2 of their time at Trust A and 0.8 of their time at Trust B, as shown in the table below:

<table>
<thead>
<tr>
<th></th>
<th>Headcount</th>
<th>FTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Trust A</td>
<td>1</td>
<td>0.2</td>
</tr>
<tr>
<td>Trust B</td>
<td>1</td>
<td>0.8</td>
</tr>
<tr>
<td>Regional</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>

- Headcount refers to the total number of staff in either part time or full-time employment within an organisation and/or care setting. Subtotals such as HEE totals or care setting totals are unlikely to add up to match the national figures because at a national level figures would only include a count of each individual once. However, it is possible for that individual to be working in two part time roles in more than one HEE and/or care setting. In these cases they would appear once in each HEE and/or care setting.

- FTE is the full time equivalent and is based on the proportion of time staff work in a role. FTE does not, therefore, measure the total hours in which work is carried out. For example, a doctor may be expected to work 48 hours in a week and this would be a FTE of 1. A nurse is usually expected to work 37.5 hours each
week, this is also 1 FTE. In both cases they may work longer and some staff may do overtime. That is not captured in the data used in this publication. Our earnings statistics show pay for additional work.

Methodology

There are several steps taken to add value, improve data quality and assist classification to staff groups prior to publication.

1. Only staff who have a contracted full time equivalent (FTE) greater than zero are extracted from ESR.

2. The data is divided into a separate Non-Medical dataset and a Medical and Dental dataset using the set of known medical pay scales as the initial determining field.

3. Successive tests using corroborative fields within the data to confirm or reclassify records between the medical and non-medical sets.

4. Fields within the data are used to determine the grade of the medical staff.

5. Occupation codes are used to classify non-medical staff into staff groups and these are checked to ensure that the grades of staff are appropriate to their role. Where it is not, a new staff group is assigned based on other information within the person’s record. Where that is not possible the person is classed as having an unknown staff group.

6. Each job of each person is allocated to the organisation where they work. This can differ to the trust holding their record.

7. The data is matched against earnings data. Where a person is not earning, or their record shows they are not a recent starter in post, the record is not included in statistics showing staff who provide services.

8. The data is split into classifications based on the organisation staff work in. This classification determines whether a job is shown as at an NHS Trust or CCG, at an NHS Support Organisation or Central Body, or is an independent healthcare provider that is using ESR. This classification determines which publication a record is included in.
The Data

Tables containing the data are published in Excel or csv formats on our website: https://digital.nhs.uk/data-and-information/publications/statistical/nhs-workforce-statistics

The tables contain data for the following:

- National and HEE regional level table of headcount and FTE by major staff groups – as a rolling monthly time series
- Time series of workforce numbers (FTE) by organisation – CSV files
- Time series of workforce numbers (headcount and FTE) by organisation, including: Medical grades by organisation and Staff groups by care setting and level by organisation
- Time series of staff groups (FTE) by level and care setting
- Doctors by grade and specialty (FTE).

The following data – produced on a quarterly basis:

- Quarterly reasons for leaving (all staff) and compulsory/voluntary redundancy for professionally qualified staff group.
- Additional quarterly data for staff in NHS trusts and CCGs, support organisations plus bank staff information.
- Exploratory table (workforce by care setting, level, org type etc)

There are also occasional one-off special/in-depth reports such as the mental health workforce report published in January 2018.
